

# Project XML

objectif : site ecommerce

**Produit:** PC (marque, modele, CPU, ram, size) + TL (marque, modele, CPU, ram, size, camera) + Accessoires + Camera

**Acteurs:** Admin (root + manager) → Client (Guest + subscriber)

## Scenario:

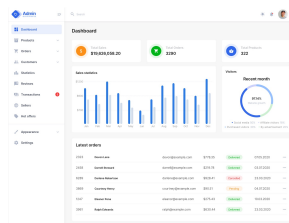

guest perspective: enter website → invite to sign up + display product → operations on product (filter + search + sort + add to cart + generate catalogue)

[if] add to cart must sign up → add to cart → checkout → generate receipt

[if] catalogue page → fill form → generate catalogue

admin perspective: enter website → login → display dashboard

tools → users (add + block + remove + suspend) + products (add + remove + update) + statistics (customer + products + sales) with time

## Technologies:

**project management:** git + github + github project planner

**Frontend:** html + css (bootstrap) + javascript(jquery + libraries)

**Backend:** php (laravel + xml)

**database:** xml
